

## EM5/E

### Screwable temperature transducer with silicon cable

Measuring size: temperature

Output: 0-10 V, 4-20 mA, 2 Relay

Highlights: Pmax 40 bar, thread G1/2 inch

### Description

The EM5/E screwable transducer with silicon cable registers the temperature at a maximum pressure of 40 bar in gaseous and liquid media and converts this measured value into a linear output signal 0-10 V respectively 4-20 mA. As an option the temperature transducer has two potential-free changeover contacts and a backlit display. The display content can be rotated in 90° steps using a menu and the measured value, the switching threshold set, the state of the respective relay, the MIN/MAX measured values for the selected intervals(1 h / 6 h / 12 h / 24 h) etc. can be read out. On the display version the user can, via the menu, specify an individual temperature range.

The stainless steel screwable immersion sleeve, which protects the sensor from mechanical shocks, is connected splash-proof with the connecting cable and is screwed directly into the container or the pipeline using the G1/2 inch thread.
