

## TPM2/E

Temperature transducer with stainless steel room pendulum

Measuring size: temperature

Output: 0-10 V, 4-20 mA, 2 Relay

Highlights: stainless steel pendulum

### Description

The TPM2/E room pendulum transducer registers the temperature in, for example, high rooms and converts this measured value into a linear output signal 0-10 V respectively 4-20 mA. As an option the temperature transducer has two potential-free changeover contacts and a backlit display. The display content can be rotated in 90° steps using a menu and the measured value, the switching threshold set, the state of the respective relay, the MIN/MAX measured values for the selected intervals(1 h / 6 h / 12 h / 24 h) etc. can be read out.

On the display version the user can, via the menu, specify an individual temperature range.

The temperature transducer is simply hung in the room as a pendulum, whereby an accurate measurement result for the room temperature is ensured in high rooms.
