

FuehlerSysteme eNET International  
The Brand for Sensor Technology

# GATEWAY SOLUTIONS

# INPUT

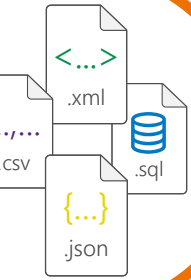

- each FuehlerSysteme-Transducer is also available as a digital Modbus-RTU version
- all common conditions can be captured (Temperature, Pressure, Humidity, Air-Quality, Flow, Brightness, Motion, Meteorology etc.)
- simple wiring via RS485, RJ-45 or COM-Port

# PROCESS

- standardized data formats
- gateway configuration via intuitive Web-UI
- access through browser and terminal browser
- state of the art graphical development environment for data control
- individually expandable with plugins
- support by remote access
- embedded ftp-server

## Data Formats

## Transmission

## Output

## Storage

## Conversion

# OUTPUT

- output by Ethernet cable or wireless via LTE
- standardized transmission (OPC UA, MQTT et al.)
- possibility to store the data in the cloud or locally at the gateway
- data conversion: Modbus-RTU, BACnet, Snap7 etc.

FuehlerSysteme eNET International  
The Brand for Sensor Technology

## OUR PROMISE

### Get it all from one source

from the planning over the conception up to the professional realisation we will support you with our field devices, gateways and software solutions.

### Benefit from our know-how

We will be glad to support you with our extensive expertise to manage your projects. Together we will find the perfect solution for all your requirements.

### Innovation

We don't stay still, but continuously work on ourselves products, to fulfil your wishes the best way. Our long experience in the sensors industry appears in all our developments.
